

I would like to support an increase to Solar export limits.

We have an 8.8 kW system installed that frequently wastes up to 3 kW/h because we can't use the electricity at that time, and the export limit for Orion is 5 kW.

While the amounts are small, the combination from rooftops could help reduce the pressure on electricity production.

I would like Orion to raise its export limit to at least 8 kW/h.

Thank you
