	8.1.	Creation of loss factors (Clause 11.2)	.66
Conc	lusion		.67
	Partio	cipant response	.67

## **EXECUTIVE SUMMARY**

This distributor audit was performed at the request of **The Lines Company Ltd (TLC)** to encompass the Electricity Industry Participation Code requirement for an audit as required by clause 11.10 of part 11. The audit was conducted in accordance with the Guideline for Distributor Audits V7.2, which was produced by the Electricity Authority.

TLC have continued to make improvements during the audit period. Four of the five recommendations from the last audit have been adopted which has led to improvements in data accuracy through improvements in data validation. I have repeated the recommendation from previous audits that TLC reviews the electrical connection process for streetlights to ensure that a trader has accepted responsibility for the additional load.

The main areas of non-compliance relate to the timeliness and accuracy of registry updates. The late updates were due to delays in processing information, backdated corrections, or late provision of information from the field. Most of the inaccurate information identified was corrected during the audit.

This audit found nine areas of non-compliance and makes one recommendation for improvement. The future risk rating is 13 (a reduction from 21 in the last audit), indicating that the next audit be due in 12 months. I have considered this in conjunction with TLC's responses and I agree with this recommendation.

The matters raised are set out in the table below.

# AUDIT SUMMARY

## NON-COMPLIANCES

Subject	Section	Clause	Non-Compliance	Controls	Audit Risk Rating	Breach Risk Rating	Remedial Action
Requirement to provide complete and accurate information	2.1	11.2(1)	Some incorrect address, initial electrical connection date, distributed generation and NSP information was identified during the audit. All confirmed exceptions were corrected during the audit except two ICPs with incorrect distributed generation details.	Strong	Low	1	Identified
Timeliness of Provision of ICP Information to the registry manager	3.4	7(2) of Schedule 11.1	Two ICPs were made "ready" after electrical connection, and therefore trading, had occurred.	Strong	Low	1	Cleared
Timeliness of Provision of Initial Electrical Connection Date	3.5	7(2A) of Schedule 11.1	Late population of the initial electrical connection dates for 74 ICPs.	Moderate	Low	2	Identified
Connection of ICP that is not an NSP	3.6	11.17	A trader was not recorded on the registry on the initial electrical connection date for two ICPs.	Strong	Low	1	Cleared
Meter bridging	3.18	10.33C	Retailer not notified of bridged meter within one business day.	Moderate	Low	2	Identified
Changes to registry information	4.1	8 Schedule 11.1	Two late address updates.	Moderate	Low	2	Investigating
ICP location address	4.4	2 Schedule 11.1	404 ICPs with an incorrect address region recorded on the registry.	Strong	Low	1	Identified

Subject	Section	Clause	Non-Compliance	Controls	Audit Risk Rating	Breach Risk Rating	Remedial Action
			An unknown number of other ICPs are likely to have incorrect address regions recorded.				
Distributors to Provide ICP Information to the Registry manager	4.6	7(1) Schedule 11.1	Initial electrical connection dates One ICP created during the audit period, and three ICPs created and connected prior to the audit period (but after 29 August 2013) had incorrect initial electrical connection dates. One network event populating the initial electrical connection date had an incorrect event date applied. Distributed generation Three ICPs had incorrect distributed generation details. NSP Incorrect NSP dedicated flag for one ICP.	Moderate	Low	2	Identified
Responsibility for metering information for NSP that is not a POC to the grid	6.8	10.25(1) & 10.26(1)	Metering installation certification details were not provided to the reconciliation manager within 20 business days of recertification for TLC0111.	Strong	Low	1	Cleared
Future Risk Rating	5					13	

Future risk rating	0-1	2-5	6-8	9-20	21-29	30+
Indicative audit frequency	36 months	24 months	18 months	12 months	6 months	3 months

# RECOMMENDATIONS

Subject	Section	Recommendation	Description
Electrical connection of a point of connection	3.16	Electrical connection of a point of connection	Review the electrical connection process for streetlights to ensure that a trader has accepted responsibility for the additional load.

# ISSUES

Subject	Section	Issue	Description
		Nil	

## 1. ADMINISTRATIVE

#### 1.1. Exemptions from Obligations to Comply with Code (Section 11)

#### **Code reference**

Section 11 of Electricity Industry Act 2010.

#### Code related audit information

*Section 11 of the Electricity Industry Act provides for the Electricity Authority to exempt any participant from compliance with all or any of the clauses.* 

#### **Audit observation**

The Authority website was checked to determine whether there are code exemptions in place.

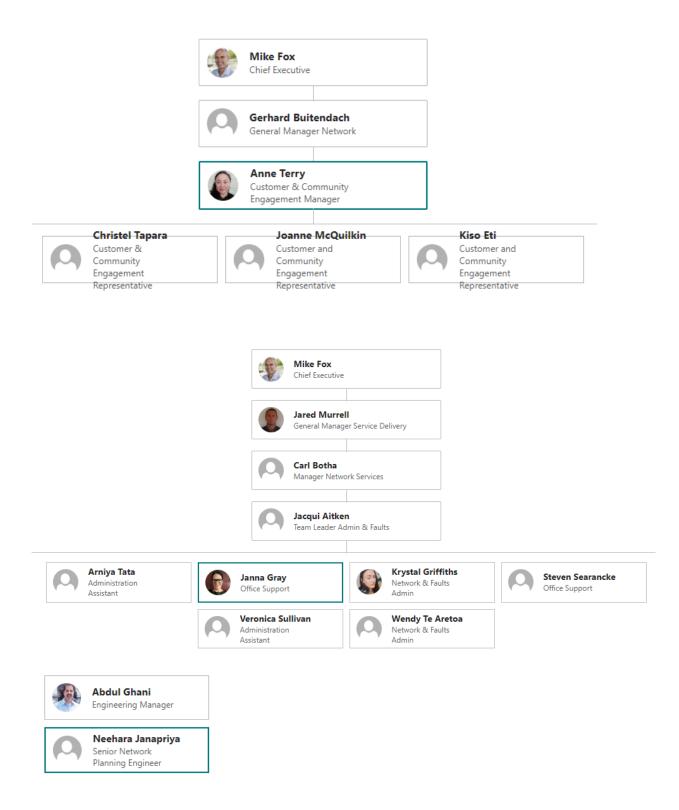

#### **Audit commentary**

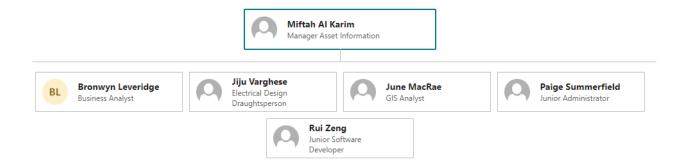

Review of exemptions on the Authority website confirmed that there are no exemptions in place relevant to the scope of this audit.

#### 1.2. Structure of Organisation

TLC provided an organisational structure. The relevant parts are detailed below:

	<b>P</b>	Mike Fox Chief Executive				
	<b>@</b>	Romay Runde General Manage				
	ρ	<b>Kyla Johanser</b> Pricing, Regulato Manager		mercial		
0	Craig Donal Pricing & Regu Specialist		0	<b>Els Comrie</b> Billing & Regis Specialist	try	

## 1.3. Persons involved in this audit

#### Auditor:

Name	Company	Role
Brett Piskulic	Provera	Auditor

## Personnel assisting in this audit were:

Name	Title	Organisation
Els Comrie (Audit lead)	Billing & Registry Specialist	The Lines Company
Janna Gray	Office Support	The Lines Company
Krystal Griffiths	Network and Faults Administrator	The Lines Company
Kyla Johanson	Pricing, Regulatory and Commercial Manager	The Lines Company
Anne Terry	Customer & Community Engagement Manager	The Lines Company
Jacqui Aitken	Team Leader Admin & Faults	The Lines Company
Abdul Ghani	Engineering Manager	The Lines Company
Neehara Janapriya	Senior Network Planning Engineer	The Lines Company
Miftah Al Karim	Manager Asset Information	The Lines Company

## 1.4. Use of contractors (Clause 11.2A)

## **Code reference**

## Clause 11.2A

## Code related audit information

A participant who uses a contractor

- remains responsible for the contractor's fulfilment of the participants Code obligations,
- cannot assert that it is not responsible or liable for the obligation due to the action of a contractor,
- must ensure that the contractor has at least the specified level of skill, expertise, experience, or qualification that the participant would be required to have if it were performing the obligation itself.

## Audit observation

TLC does not normally subcontract any activities within the scope of this audit. Independent contractors are used if the workload in the field requires this.

## Audit commentary

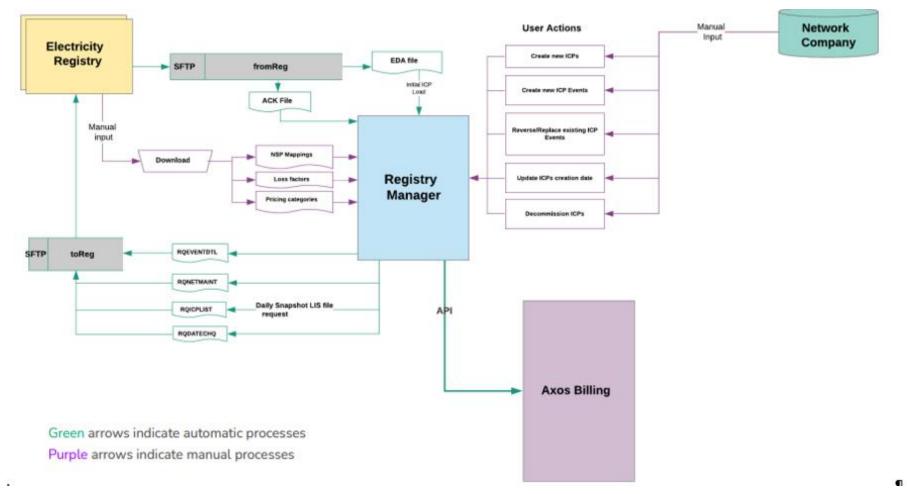

Wayne Pooley and Hakaraia Electrical are engaged by TLC for electrical inspection when required due to workloads. They are qualified electricians and electrical inspectors.

## 1.5. Supplier list

TLC occasionally subcontracts dependent on workload requirements as detailed above.

## 1.6. Hardware and Software

TLC provided the diagram below showing the integration of the Axos Registry Manager system with other systems and processes:

Axos backups are created each morning and retained for 30 days.

Access to TLC's systems is restricted through individual logins and passwords. An audit trail of user actions is kept within Axos.

Basix is TLC's asset management system. NSP information held in Basix is manually updated in Axos.

## 1.7. Breaches or Breach Allegations

There have been no alleged breaches during the audit period.

## 1.8. ICP and NSP Data

The table below lists the relevant NSPs, and their associated balancing areas. There have been no changes made during the audit period. Active ICP numbers are as of 13 November 2023.

Dist	NSP POC	Description	Parent POC	Parent Ntwk	Balancing Area	Ntwk type	Start date	No of ICPs

Inactive – disconnected at meter box switch (1,10)	4	1	-	-	-	1	-	-
Inactive - at meter box switch (1,11)	1	1	1	2	3	5	9	57
Inactive – ready for decommissioning (1,6)	7	15	12	8	5	42	76	52
Decommissioned (3)	3,802	3,741	3,682	3,546	3,465	3,175	2,832	2,502

## 1.9. Authorisation Received

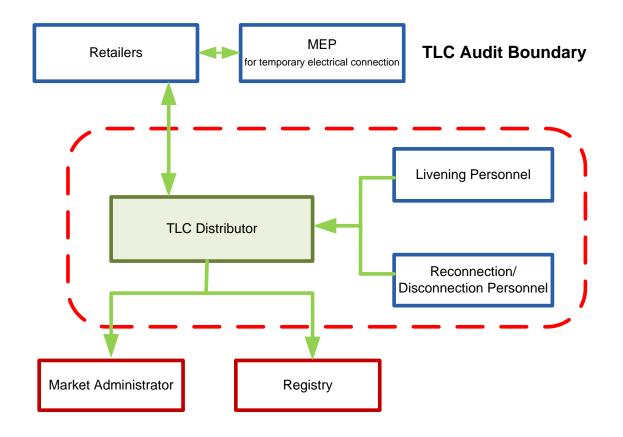

TLC provided a letter of authorisation to Provera.

## 1.10. Scope of Audit

This distributor audit was performed at the request of TLC to encompass the Electricity Industry Participation Code requirement for an audit as required by clause 11.10 of part 11. The audit was carried out at TLC's offices in Te Kuiti on 23 January 2024. The audit was conducted in accordance with the Guideline for Distributor Audits V7.2, which was produced by the Electricity Authority. All activities covered by this audit are conducted at TLC's office in Te Kuiti.

The audit analysis was based on registry list, event detail and audit compliance reports for 1 March 2023 to 13 November 2023, and registry list snapshot and meter installation details reports for 13 November 2023.

The scope of the audit is shown in the diagram below, with the TLC audit boundary shown for clarity.

## 1.11. Summary of previous audit

I reviewed the previous audit conducted in February 2023 by Tara Gannon. The current status of the non-compliances and recommendations is listed below.

## **Table of Non-compliances**

Subject	Section	Clause	Non-compliance	Status
Requirement to provide complete and accurate information	2.1	11.2(1)	All of the errors were corrected during the audit. Initial electrical connection dates Two ICPs created during the audit period, and three ICPs created and connected prior to the audit period (but after 29 August 2013) had incorrect initial electrical connection dates. Ten network events populating the initial electrical connection date had incorrect event dates applied, out of a population of 32 with potentially incorrect dates. Distributed generation Two missing distributed generation updates. Seven updates with incorrect event dates. Three distributed generation updates provided on application form date instead of installation date, and the event date was incorrect.	Still existing

Subject	Section	Clause	Non-compliance	Status
			Two distributed generation updates with incorrect generation capacity.	
			One ICP had incorrect distributed generation details.	
			Unmetered load	
			Three ICPs had incorrect distributor unmetered load details.	
			NSP	
			ICP 0001308490WME19 Owhango Manawatu, was recorded against NPK0331 but should have been recorded against ONG0331.	
			Address	
			ICPs 0001113482WMBE8, 0005720822WMFBB and 0005720842WM04B were recorded with Waimiha <i>Waikato</i> as the town and region but should have been recorded as Waimiha <i>Manawatu</i> .	
Provision of information on dispute resolution scheme	2.4	11.30A	Information on Utilities Disputes was temporarily excluded from addressed letters, but this was resolved prior to the audit.	Cleared
Timeliness of Provision of ICP Information to the registry manager	3.4	7(2) of Schedule 11.1	Two late updates to ready status, network, address, and pricing information for historic unmetered load ICPs.	Still existing
Timeliness of Provision of Initial Electrical Connection Date	3.5	7(2A) of Schedule 11.1	Late population of the initial electrical connection dates for 43 ICPs.	Still existing
Connection of ICP that is not an NSP	3.6	11.17	A trader was not recorded on the registry on the initial electrical connection date for new standard unmetered ICPs 1100000269WM70B and 1100000260WM95A.	Still existing
Electrical connection of a point of connection	3.16	10.33A	No trader acceptance prior to the electrical connection of new streetlights to the network.	Cleared
Meter bridging	3.18	10.33C	Traders are not consistently notified of bridged meters.	Still existing
Changes to registry	4.1	8 Schedule	One late address update.	Still existing
information		11.1	Up to 167 late pricing updates.	
			23 late updates to decommissioned status.	
			49 late distributed generation updates.	
			Two late NSP changes.	
			155 late updates to the direct billed status.	
Notice of NSP for each ICP	4.2	7(1),(4) and (5)	ICP 0001308490WME19 Owhango Manawatu, was recorded against NPK0331 but should have been	Cleared

Subject	Section	Clause	Non-compliance	Status
		Schedule 11.1	recorded against ONG0331. The NSP was corrected during the audit.	
ICP location address	4.4	2 Schedule 11.1	ICPs 0001113482WMBE8, 0005720822WMFBB and 0005720842WM04B were recorded with Waimiha <i>Waikato</i> as the town and region but should have been recorded as Waimiha <i>Manawatu</i> . The addresses have now been corrected.	Still existing
			Some other ICPs are likely to have incorrect address regions recorded.	
Distributors to Provide ICP Information to the Registry manager	4.6	7(1) Schedule 11.1	All of the errors were corrected during the audit. Initial electrical connection dates Two ICPs created during the audit period, and three ICPs created and connected prior to the audit period (but after 29 August 2013) had incorrect initial electrical connection dates. Ten network events populating the initial electrical connection date had incorrect event dates applied, out of a population of 32 with potentially incorrect dates. <b>Distributed generation</b> Two missing distributed generation updates. Seven updates with incorrect event dates. Three distributed generation updates provided on application form date instead of installation date, and the event date was incorrect. Two distributed generation updates with incorrect generation capacity. One ICP had incorrect distributed generation details. <b>Unmetered load</b> Three ICPs had incorrect distributor unmetered load details. <b>NSP</b> ICP 0001308490WME19 Owhango Manawatu, was recorded against NPK0331 but should have been recorded against ONG0331. <b>Address</b> ICPs 0001113482WMBE8, 0005720822WMFBB and 0005720842WM04B were recorded with Waimiha <i>Waikato</i> as the town and region but should have been recorded as Waimiha Manawatu.	Still existing for new examples of incorrect Initial electrical connection dates and incorrect distributed generation information. Cleared for incorrect unmetered load and incorrect NSP.
Maintenance of price category codes	4.12	23 of Schedule 11.	15 new unmetered load price categories (UML1-UML15) were not created on the registry two months before their registry start date.	Cleared

Subject	Section	Clause	Non-compliance	Status
Responsibility for metering information for NSP that is not a POC to the grid	6.8	10.25(1) & 10.26(1)	MEP0112LINENP and MEP0113LINENP temporarily had expired metering certification.	Cleared

# **Table of Recommendations**

Subject	Section	Recommendation	Status
Requirement to provide complete and accurate information	2.1	Refine the BI report to eliminate the invalid mismatches, then use it to validate data in fields held in Axos against the registry at least weekly and investigate and resolve any discrepancies.	Cleared
Requirement to provide complete and accurate information	2.1	Review and investigate accuracy exceptions on the AC020 trader compliance report at least monthly.	Cleared
Electrical connection of a point of connection	3.16	Review the electrical connection of streetlights to ensure that a trader has accepted responsibility for the additional load.	Still existing
Distributors to Provide ICP Information to the Registry manager	4.6	Check the list of event updates with potentially incorrect initial electrical connection dates and update Axos and the registry if necessary.	Cleared
Distributors to Provide ICP Information to the Registry manager	4.6	Confirm that the distributed generation details are correct for 1100000174WM1FE.	Cleared

## 2. OPERATIONAL INFRASTRUCTURE

#### 2.1. Requirement to provide complete and accurate information (Clause 11.2(1) and 10.6(1))

#### **Code reference**

Clause 11.2(1) and 10.6(1)

#### Code related audit information

A participant must take all practicable steps to ensure that information that the participant is required to provide to any person under Parts 10 or 11 is:

- a) complete and accurate,
- b) not misleading or deceptive,
- c) not likely to mislead or deceive.

## Audit observation

I walked through the process to ensure that registry information is complete, accurate and not misleading or deceptive, including viewing reports used to resolve discrepancies. The registry list and audit compliance reports were examined to determine compliance.

#### Audit commentary

#### **Registry synchronisation**

ICP status, address, network, and pricing information is maintained in Axos. Each event type has an event date field, which defaults to today's date and can be modified.

Axos validates the data to ensure that the data meets the registry's requirements for registry fields; and drop-down boxes are used to restrict values where practical. There are some system controls over data consistency, for example:

- generation capacity and fuel type can only be populated if the installation type is B or G,
- initial electrical connection dates cannot be future dated, and
- if GPS northing or easting is populated, the other must also be populated.

A synchronisation is completed each day to capture registry data updates within the last seven days unless it is manually triggered as an operator makes a change.

Axos retrieves registry acknowledgement files every five minutes. The files are reviewed in the registry manager to identify successful and failed updates. Failed updates appear as synchronisation status alerts on the landing page in Axos and are investigated.

If an event needs to be changed, it can be deleted before the record is synchronised with the registry, otherwise Axos allows event reversals and replacements to be sent. Events can only be reversed if they are the latest event for that event type, and if an older event needs to be reversed all later events must be reversed or the update will need to be manually processed on the registry.

Registry events processed by other parties are updated in Axos daily. A synchronisation is completed each morning at 4am to capture registry data updates within the last seven days. Axos does not use notification files.

## Registry and data validation

The registry synchronisation ensures that the current values recorded in Axos match the registry. Unsuccessful updates are identified and resolved through the synchronisation process.

There are controls in place to ensure that if a change is deleted or modified in Axos prior to synchronisation the correct values will be updated on the registry, and the systems will be consistent.

Power BI reporting compares current and historic records in Axos and the registry. The Power BI reports were reviewed a minimum of once per month throughout 2023. The issue identified in the previous audit where large numbers of invalid mismatches were being reported of which very few were genuine exceptions has been resolved.

The audit compliance reports are being reviewed periodically as workloads allow and I saw evidence of reviews in February, March, May, August, September and November 2023.

TLC also runs registry CD (current details) reports at least monthly and completes thorough analysis to identify discrepancies between Axos and registry information and identify duplicate and missing address fields.

## Data accuracy issues

Whilst TLC has robust processes in place to identify and correct discrepancies the audit found some areas where missing or inaccurate information could have been discovered and resolved sooner.

Report section	Registry field(s)	Inaccurate data which was found during the audit and has been corrected
4.4	Address	404 ICPs with an incorrect address region recorded on the registry. Corrected during audit. An unknown number of other ICPs are likely to have incorrect address regions recorded. On-going investigation continuing.
4.6	Initial electrical connection dates	One ICP created during the audit period, and three ICPs created and connected prior to the audit period (but after 29 August 2013) had incorrect initial electrical connection dates. Corrected during audit. One network event populating the initial electrical connection date had an incorrect event date applied. Corrected during audit.
4.6	Distributed generation	Three ICPs had incorrect distributed generation details. One was corrected during audit.
4.6	NSP	Incorrect NSP dedicated flag for one ICP. Corrected during audit.

## Audit outcome

## Non-compliant

Non-compliance	Description
Audit Ref: 2.1 With: Clause 11.2(1)	Some incorrect address, initial electrical connection date, distributed generation and NSP information was identified during the audit. All confirmed exceptions were corrected during the audit except two ICPs with incorrect distributed generation details.
	Potential impact: Low
	Actual impact: Low
From: 01-Mar-23	Audit history: Multiple times
To: 13-Nov-23	Controls: Strong
	Breach risk rating: 1

	Audit risk rating	Rationale for audit risk rating				
Lov	N	The controls are rated as strong as validation occurs regularly and most errors are corrected soon after discovery. The audit risk rating is assessed as low as the volume of errors is small in relation to the number of ICPs managed.				
	Actions ta	ken to resolve the issue	Completion	Remedial action status		
			date			
		dresses. There are approximately 3,000 wo distributed generation ICPs.	30/06/2024	Identified		
Pre	eventative actions take	en to ensure no further issues will occur	Completion date			
1.	Use of pre-populated	address fields in Axos;	8/03/2024			
2.	Ongoing education an connections.	nd monitoring of distributed generation				

## 2.2. Requirement to correct errors (Clause 11.2(2) and 10.6(2))

#### **Code reference**

Clause 11.2(2) and 10.6(2)

## **Code related audit information**

If the participant becomes aware that in providing information under this Part, the participant has not complied with that obligation, the participant must, as soon as practicable, provide such further information as is necessary to ensure that the participant does comply.

#### Audit observation

TLC's data management processes were examined.

#### **Audit commentary**

TLC have processes in place to identify and resolve registry discrepancies, which have improved since the previous audit through refining the Power BI reporting and increased frequency of reporting. Inaccurate data identified during this audit was resolved as soon as practicable.

#### Audit outcome

Compliant

## 2.3. Removal or breakage of seals (Clause 48(1A) and 48(1B) of Schedule 10.7)

#### **Code reference**

Clause 48(1A) and 48(1B) of Schedule 10.7

#### **Code related audit information**

If the distributor provides a load control signal to a load control switch in the metering installation, the distributor can remove or break a seal without authorisation from the MEP to bridge or unbridge the load control device or load control switch – as long as the load control switch does not control a time block meter channel.

Distributor audit report V16

*If the distributor removes or breaks a seal in this way, it must:* 

- ensure personal are qualified to remove the seal and perform the permitted work and they replace the seal in accordance with the Code,
- replace the seal with its own seal,
- have a process for tracing the new seal to the personnel,
- notify the metering equipment provider and trader.

#### Audit observation

Processes for removal or breakage of seals were reviewed.

#### Audit commentary

Only qualified personnel complete work on meters including removal or breakage of seals. All qualified personnel have their own seals to use which are able to be traced to the person.

TLC will only undertake this work on Influx meters, and they advise Influx in every instance. Otherwise, a request to complete the required work is sent to the retailer.

#### Audit outcome

Compliant

## 2.4. Provision of information on dispute resolution scheme (Clause 11.30A)

#### **Code reference**

Clause 11.30A

#### Code related audit information

A distributor must provide clear and prominent information about Utilities Disputes:

- on their website,
- when responding to queries from consumers,
- in directed outbound communications to consumers about electricity services and bills.

*If there are a series of related communications between the distributor and consumer, the distributor needs to provide this information in at least one communication in that series.* 

## Audit observation

The process to ensure that information on Utilities Disputes is provided to customers was discussed. TLC's website, email footers, and Utilities Disputes Messaging documentation was reviewed.

## Audit commentary

Information on Utilities Disputes is currently provided:

- on a voice recording when consumers contact TLC by phone,
- as part of the customer services script when responding to inbound calls, and in person enquiries at TLC's office,
- as part of the email signature for emails,
- on TLC's website, and
- on outbound letters regarding service and service changes, including planned outages, and maintenance.

In the previous audit non-compliance was recorded as information on Utilities Disputes was temporarily excluded from addressed letters. I confirmed that the information above was provided continuously for the audit period.

#### Audit outcome

Distributor audit report V16

Compliant

## 3. CREATION OF ICPS

#### 3.1. Distributors must create ICPs (Clause 11.4)

**Code reference** 

Clause 11.4

#### Code related audit information

The distributor must create an ICP identifier in accordance with Clause 1 of Schedule 11.1 for each ICP on the distributor's network. This includes an ICP identifier for the point of connection at which an embedded network connects to the distributor's network.

#### Audit observation

The new connection process was examined in detail and is described in section 3.2 below.

181 ICPs were created during the period from 1 March 2023 to 13 November 2023. I checked a sample of ten ICPs from the point of application through to when the ICP was created to confirm the process and controls.

#### Audit commentary

ICPs are created in Axos, and the user populates the address, and network event information at the same time. There are controls over fields to ensure that they are consistent and meet the registry requirements. Once the required fields are populated the user selects the "up sync" button to send the events to the registry, which creates the ICP with the "new" status.

Once the event acknowledgements have been received by Axos and a distributor pricing event has been created and synchronised with the registry, the status is updated to the "ready" status automatically. ICPs are normally updated to "ready" status on the day that they are created.

TLC creates ICPs as required by clause 1 of schedule 11.1, and the sample checked confirmed that they were created compliantly.

There are no ICPs with shared unmetered load on TLC's network.

The distributor is responsible for creating the ICP for the point of connection for an embedded network to its parent network. There have been no new embedded networks created during the audit period.

#### Audit outcome

Compliant

#### 3.2. Participants may request distributors to create ICPs (Clause 11.5(3))

**Code reference** 

Clause 11.5(3)

#### **Code related audit information**

The distributor, within three business days of receiving a request for the creation of an ICP identifier for an ICP, must either create a new ICP identifier or advise the participant of the reasons it is unable to comply with the request.

## Audit observation

The new connection process was examined in detail. I checked a sample of ten of the 181 ICPs created during the period from 1 March 2023 to 13 November 2023 to determine whether the ICPs had been created within three business days of a request by a trader. The sample included different traders.

#### Audit commentary

New connection data is entered into Axos and transferred to the registry. Copies of all documents are scanned and filed on TLC's network.

- An application for new load (AFL) is provided to TLC by the customer, the customer's agent, or the trader. The Application is submitted using an online form on TLC's website.
- The AFL is approved or declined by a TLC engineer, and the requestor is notified via email.
- A request for approval is sent to the proposed trader indicated by the requestor, including confirmation of the pricing category to be applied.
- The ICP is created in Axos and the data is synchronised with the registry as discussed in **section 3.1**.
- Once the proposed trader has confirmed acceptance and requested livening, TLC schedules the connection to be completed.

The process ensures that ICPs are created on time but will not be made "ready" without the trader's approval.

A very small number of new connection requests are made by retailers, and most applications are made by the customer or their electrician. If an ICP cannot be created on request because not all the requested information is provided, the trader and/or customer will be advised via email of the reasons for the delay. No recent examples of this were available.

I checked a sample of ten new ICPs and found none were requested by the trader.

#### Audit outcome

Compliant

## 3.3. Provision of ICP Information to the registry manager (Clause 11.7)

**Code reference** 

Clause 11.7

Code related audit information

The distributor must provide information about ICPs on its network in accordance with Schedule 11.1.

#### Audit observation

Data populated on the registry was checked for all ICPs created during the audit period, to confirm that required fields were populated on time.

#### Audit commentary

Processes to send, receive, and validate registry information are discussed in detail in section 2.1.

ICPs are created in Axos, and the user populates the address, and network event information at the same time. There are controls over fields to ensure that they are consistent and meet the registry requirements. Once the required fields are populated the user selects the "up sync" button to send the events to the registry, which creates the ICP with the "new" status.

Once the event acknowledgements have been received by Axos and a distributor pricing event has been created and synchronised with the registry, the status is updated to the "ready" status automatically.

When creating an ICP, the operator:

- checks the address in Axos, on the registry and in the Basix GIS system before creating the ICP, to ensure that there are no existing ICPs with the same address (Axos will flag to an operator if there is another ICP with the same address, but it must be exactly the same to flag correctly),
- selects the transformer and NSP manually in Axos, these details are determined from engineering team data entered into Basix, and
- selects the loss factor which is determined based on geography.

The Billing and Registry Specialist provides the price plan and checks if there are any address issues (such as lot numbers), and that the transformer, NSP and loss factor are correctly entered.

ICP information provided to the registry was correct for the sample of ten ICPs checked against application and connection details. The required fields were populated on the registry for all new connections.

## Audit outcome

Compliant

## 3.4. Timeliness of Provision of ICP Information to the registry manager (Clause 7(2) of Schedule 11.1)

## **Code reference**

Clause 7(2) of Schedule 11.1

## Code related audit information

The distributor must provide information specified in clauses 7(1)(a) to 7(1)(o) of schedule 11.1 as soon as practicable and prior to electricity being traded at the ICP.

## Audit observation

The audit compliance report was examined to determine the timeliness of the provision of initial electrical connection dates for new connections. All late updates were checked.

## Audit commentary

I checked whether the information required under clause 7(2) of schedule 11.1 was populated prior to initial electrical connection for new ICPs using the audit compliance report, registry list and event detail report.

The audit compliance report identified two ICPs which were made "ready" after electrical connection, and therefore trading, had occurred. Both cases were examined and found that for ICP 1100000422WMD7C there was a mix-up with a neighbouring ICP which was incorrectly connected. The error was identified when the contractor returned to site to connect the neighbouring ICP and the registry was subsequently updated after reversal of later events by other participants. For ICP 1100000501WM5ED the "Grid Point Code" was not entered by the TLC operator which prevented the ICP moving to the "ready" status, this was discovered and corrected when the connection information was received from the field.

ICP	Status "ready" input date	Status "active" event date	Business days to update to "ready"	Initial electrically connected date
1100000422WMD7C	8 September 2023	10 January 2023	166	10 January 2023
1100000501WM5ED	4 August 2023	25 July 2023	8	25 July 2023

ICP information provided to the registry was correct for the sample of ten ICPs checked against application and connection details. The required fields were populated on the registry for all new connections.

## Audit outcome

#### Non-compliant

Non-compliance	Description				
Audit Ref: 3.4 With: Clause 7(2) of	Two ICPs were made "ready" after electrical connection, and therefore trading, had occurred.				
Schedule 11.1	Potential impact: Low				
	Actual impact: Low				
	Audit history: Twice

## 3.5. Timeliness of Provision of Initial Electrical Connection Date (Clause 7(2A) of Schedule 11.1)

## **Code reference**

Clause 7(2A) of Schedule 11.1

## Code related audit information

The distributor must provide the information specified in subclause (1)(p) to the registry manager no later than ten business days after the date on which the ICP is initially electrically connected.

## Audit observation

The audit compliance report was examined to determine the timeliness of the provision of initial electrical connection dates for new connections. A sample of 15 late updates were checked to determine why they were late.

Distributor audit report V16

#### Audit commentary

#### Initial electrical connection date process

TLC's network services team complete initial electrical connection and provide paperwork confirming the date. In many cases one person completes the network connection and metering installation at the same time. If different people are involved in the connection, the visit is coordinated so that the meter installation and connection occur on the same day. If it is not possible for the meter installation and connection to be completed on the same day, the network services team ensures that the ICP is not connected, and electricity is not flowing into the installation until after the meter is installed.

Initial electrical connection dates are entered into Axos, and data is automatically transferred from Axos to the registry as described in **section 2.1**. Initial electrical connection dates are validated against trader active status dates and meter certification dates using the audit compliance report.

Event dates should reflect the date from which the attribute values for the event apply. In Axos the event date defaults to the current date and can be manually edited by the user if a different event date should be applied. I checked the 167 active network events which first populated the initial electrical connection date and confirmed that the correct event dates had been applied.

## Late initial electrical connection date updates

The audit compliance report identified 74 ICPs where the initial electrical connection date was provided more than ten business days after initial electrical connection. 28 were populated within 30 business days of initial electrical connection, 60 were within 100 business days of initial electrical connection, and the latest update was 353 business days after initial electrical connection. I checked the five latest updates (which were 151 to 353 business days after initial electrical connection), and the ten latest updates for ICPs created during the audit period:

- 11 were caused by delays in processing connection paperwork by TLC,
- one was due a mix-up with a neighbouring ICP which was incorrectly connected; the error was identified when the contractor returned to site to connect the neighbouring ICP and the registry was subsequently updated after reversal of later events by other participants,
- one was due to delays receiving the connection paperwork for a Category 2 ICP, and
- two were due to initial electrical connection dates being added in error when other network fields were updated, both have subsequently been corrected by TLC.

All of the late updates contained the correct initial electrical connection date and event date. The accuracy of the dates is discussed in **section 4.6**.

## Audit outcome

#### Non-compliant

Non-compliance	Description
Audit Ref: 3.5	Late population of the initial electrical connection dates for 74 ICPs.
With: Clause 7(2A) of	Potential impact: Low
Schedule 11.1	Actual impact: Low
	Audit history: Multiple
From: 01-Mar-23	Controls: Moderate
To: 13-Nov-23	Breach risk rating: 2
Audit risk rating	Rationale for audit risk rating

Low	I have rated the controls as moderate because most initial electrical connection updates were completed on time. The audit risk rating is low this has no direct impact on reconciliation.		
Actions ta	aken to resolve the issue	Completion date	Remedial action status
Process and instructions for contractor to return paperwork in a timely manner.		April 2024	Identified
Preventative actions taken to ensure no further issues will occur		Completion date	
Set up a process to keep t	track of the outstanding livening jobs.	April 2024	

## 3.6. Connection of ICP that is not an NSP (Clause 11.17)

## **Code reference**

Clause 11.17

## **Code related audit information**

A distributor must, when connecting an ICP that is not an NSP, follow the connection process set out in Clause 10.31.

The distributor must not connect an ICP (except for an ICP across which unmetered load is shared) unless a trader is recorded in the registry as accepting responsibility for the ICP.

In respect of ICPs across which unmetered load is shared, the distributor must not connect an ICP unless a trader is recorded in the registry as accepting responsibility for the shared unmetered load, and all traders that are responsible for an ICP on the shared unmetered load have been advised.

## Audit observation

The new connection process was examined in **sections 3.1** and **3.2**. The registry list and event detail reports were reviewed to determine compliance.

No shared unmetered load is recorded on TLC's network.

## Audit commentary

ICPs will not be electrically connected without the agreement from the trader. Trader acceptance is confirmed during the application process. Review of the registry list confirmed that:

- a trader is recorded for all ICPs with "active" or "inactive" status,
- a proposed trader is recorded for all ICPs with "ready" status, and
- shared unmetered load is not recorded for ICPs on TLC's network.

As discussed in **section 3.4**, all ICPs created during the audit period had a proposed trader recorded on the registry prior to the initial electrical connection date, apart from ICPs 1100000422WMD7C and 1100000501WM5ED where the proposed trader was recorded on the registry after the initial electrical connection of the ICPs.

I checked a sample of ten new connections and confirmed that responsibility was accepted prior to initial electrical connection.

## Audit outcome

Non-compliant

Non-compliance	Description			
Audit Ref: 3.6 With: 11.17	A trader was not recorded on the registry on the initial electrical connection date for two ICPs. Potential impact: Low Actual impact: Low Audit history: Twice			
From: 10-Jan-23	Controls: Strong			
To: 08-Sep-23	Breach risk rating: 1			
Audit risk rating	Rationale for audit risk rating			
Low	The controls are recorded as strong as they will eliminate risk to an acceptable level. The impact on settlement and participants is minor; therefore, the audit risk rating is low.			
Actions taken to resolve the issue		Completion date	Remedial action status	
Registry updated.		March 2024	Cleared	
Preventative actions taken to ensure no further issues will occur		Completion date		
Further training – flag in Axos?		April 2024		

## 3.7. Connection of ICP that is not an NSP (Clause 10.31)

#### **Code reference**

Clause 10.31

## **Code related audit information**

A distributor must not connect an ICP that is not an NSP unless requested to do so by the trader trading at the ICP, or if there is only shared unmetered load at the ICP and each trader has been advised.

## Audit observation

The new connection process was examined in **sections 3.1** and **3.2**. The registry list and event detail reports were reviewed to determine compliance.

#### **Audit commentary**

ICPs will not be electrically connected without the agreement from the trader, who in turn has an agreement with an MEP for the ICP. Trader acceptance is confirmed during the application process. The registry list showed that all active ICPs had a trader recorded on the registry.

This clause requires that a distributor must not connect an ICP across which unmetered load is shared unless a trader is recorded in the registry as accepting responsibility for the shared unmetered load. TLC does not allow or intend to allow any new shared unmetered load connections. Review of the registry lists confirmed there is no shared unmetered load connected to any ICP.

## Audit outcome

#### Compliant

#### 3.8. Temporary electrical connection of ICP that is not an NSP (Clause 10.31A)

#### **Code reference**

#### Clause 10.31A

#### **Code related audit information**

A distributor may only temporarily electrically connect an ICP that is not an NSP if requested by an MEP for a purpose set out in clause 10.31A(2), and the MEP:

- has been authorised to make the request by the trader responsible for the ICP; and
- the MEP has an arrangement with that trader to provide metering services.

*If the ICP is only shared unmetered load, the distributor must advise the traders of the intention to temporarily connect the ICP unless:* 

advising all traders would impose a material cost on the distributor, and in the distributor's reasonable opinion, the advice would not result in any material benefit to any of the traders.

#### Audit observation

The new connection process was examined in **section 3.2**.

#### Audit commentary

An ICP will not be electrically connected without the agreement from the trader, who in turn has agreement with an MEP for the ICP.

TLC's network services team complete initial electrical connection and provide paperwork confirming the date. In many cases one person completes the network connection and metering installation at the same time. If different people are involved in the connection, the visit is coordinated so that the meter installation and connection occur on the same day. If it is not possible for the meter installation and connection to be completed on the same day, the network services team ensures that the ICP is not connected, and electricity is not flowing into the installation until after the meter is installed.

Any ICPs that are temporarily electrically connected follow the same process as all other new connections.

No temporary electrical connections were identified during the audit period.

#### Audit outcome

Compliant

## 3.9. Connection of NSP that is not point of connection to grid (Clause 10.30)

#### **Code reference**

Clause 10.30

#### **Code related audit information**

A distributor must not connect an NSP on its network that is not a point of connection to the grid unless requested to do so by the reconciliation participant responsible for ensuring there is a metering installation for the point of connection.

The distributor must, within five business days of connecting the NSP that is not a point of connection to the grid, advise the reconciliation manager of the following in the prescribed form:

- the NSP that has been connected,
- the date of the connection
- the participant identifier of the MEP for each metering installation for the NSP
- the certification expiry date of each metering installation for the NSP.

#### Audit observation

The NSP table and notifications to the reconciliation manager were reviewed.

#### **Audit commentary**

No new NSPs were created by TLC during the audit period.

Audit outcome

Compliant

#### 3.10. Temporary electrical connection of NSP that is not point of connection to grid (Clause 10.30(A))

**Code reference** 

Clause 10.30(A)

#### **Code related audit information**

A distributor may only temporarily electrically connect an NSP that is not a point of connection to the grid if requested by an MEP for a purpose set out in clause 10.30A(3), and the MEP:

- has been authorised to make the request by the reconciliation participant responsible for the NSP; and
- the MEP has an arrangement with that reconciliation participant to provide metering services.

#### **Audit observation**

The NSP table was reviewed.

#### Audit commentary

No new NSPs were created by TLC during the audit period.

Audit outcome

Compliant

## 3.11. Definition of ICP identifier (Clause 1(1) Schedule 11.1)

**Code reference** 

Clause 1(1) Schedule 11.1

#### Code related audit information

*Each ICP created by the distributor in accordance with Clause 11.4 must have a unique identifier, called the "ICP identifier", determined in accordance with the following format:* 

yyyyyyyyyxxccc where:

- *yyyyyyyyy is a numerical sequence provided by the distributor,*
- xx is a code that ensures the ICP is unique (assigned by the Authority to the issuing distributor)
- ccc is a checksum generated according to the algorithm provided by the Authority.

## Audit observation

The new connection process was examined, and a sample of ten ICPs were checked.

## Audit commentary

ICP numbers are created in the correct format by Axos.

## Audit outcome

Compliant

## 3.12. Loss category (Clause 6 Schedule 11.1)

**Code reference** 

Clause 6 Schedule 11.1

**Code related audit information** 

Each ICP must have a single loss category that is referenced to identify the associated loss factors.

## Audit observation

The process of allocation of the loss category was examined. The registry list was examined to confirm all "active" ICPs have a single loss category code.

## **Audit commentary**

The loss category is assigned to the ICP based on the transformer, which is mapped to the NSP. For large ICPs the asset management group will advise the correct loss factor to be applied.

Each "active" and "inactive" ICP only has a single loss category, which clearly identifies the relevant loss factor. I checked loss factor assignments against the NSP for all "active" ICPs and confirmed they were correct.

## Audit outcome

Compliant

## 3.13. Management of "new" status (Clause 13 Schedule 11.1)

## **Code reference**

Clause 13 Schedule 11.1

## Code related audit information

The ICP status of "new" must be managed by the distributor to indicate:

- the associated electrical installations are in the construction phase (clause 13(a) of schedule 11.1)
- the ICP is not ready for activation (clause 13(b) of schedule 11.1).

## Audit observation

The ICP creation process was reviewed. The registry list, event detail report and audit compliance report were examined to determine compliance.

## Audit commentary

ICPs are created at "new" status and automatically moved to "ready" status as soon as a proposed trader and price category is supplied to the registry as described in **section 3.1**. ICPs will only remain at "new" status if there is a delay due to a network extension being required.

Distributor audit report V16

Status updates to "new" are created by the registry once the information required to achieve the status has been populated. ICPs can be reversed from "ready" to "new" status by removing the distributor pricing information in Axos and the update being synchronised with the registry. The "new" and "ready" status information is imported back into Axos through the registry synchronisation process.

Two ICPs were at "new" status at the time of my analysis. The monitoring of ICPs at the "new" and "ready" statuses is discussed in **section 3.14**.

#### Audit outcome

Compliant

#### 3.14. Monitoring of "new" & "ready" statuses (Clause 15 Schedule 11.1)

#### **Code reference**

Clause 15 Schedule 11.1

#### **Code related audit information**

If an ICP has had the status of "new" or has had the status of "ready" for 24 months or more:

- the distributor must ask the trader who intends to trade at the ICP whether the ICP should continue to have that status (clause 15(2)(a) of schedule 11.1),
- the distributor must decommission the ICP if the trader advises that the ICP should not continue to have that status (clause 15(2)(b) of schedule 11.1).

#### Audit observation

The process to monitor ICPs at "new" and "ready" status was reviewed. The registry list and audit compliance report were examined to determine compliance.

#### Audit commentary

A CD (current details) report from the registry is run at least once a month, and this identifies all ICPs at the "new" or "ready" status. These are passed to the network services team, who follow up any ICPs close to 24 months at the status with the trader. Filters in Axos are also used to identify ICPs at "new" and "ready" status.

One ICP at the "new" and three ICPs at the "ready" status for more than 24 months were identified by the audit compliance report, all four ICPs were created in October 2021. TLC had followed up and confirmed that all four were not required and they were decommissioned prior to the audit.

#### Audit outcome

Compliant

## 3.15. Embedded generation loss category (Clause 7(6) Schedule 11.1)

#### **Code reference**

Clause 7(6) Schedule 11.1

## **Code related audit information**

If the ICP connects the distributor's network to an embedded generating station that has a capacity of 10 MW or more (clause 7(1)(f) of Schedule 11.1):

- The loss category code must be unique; and
  - The distributor must provide the following to the reconciliation manager:
    - $\circ$  the unique loss category code assigned to the ICP,

- the ICP identifier of the ICP,
- the NSP identifier of the NSP to which the ICP is connected,
- the plant name of the embedded generating station.

#### **Audit observation**

The EMI wholesale data set and registry list were reviewed to identify any generation stations with capacity of 10 MW or more and determine compliance.

#### Audit commentary

TLC has no embedded generation greater than 10 MW, and no ICPs require a unique loss category.

#### Audit outcome

Compliant

#### 3.16. Electrical connection of a point of connection (Clause 10.33A)

**Code reference** 

Clause 10.33A(4)

#### **Code related audit information**

No participant may electrically connect a point of connection or authorise the electrical connection of a point of connection, other than a reconciliation participant.

#### Audit observation

Sub-clause (4) states that no participant may electrically connect a point of connection without the permission of the Reconciliation Participant. The electrical connection of streetlight circuits which are a point of connection was examined.

## Audit commentary

All metered new connections go through the new connection process described in **section 3.2.** It is expected any new streetlights are managed through the new connection process even if being added to an existing DUML streetlight ICP. I reviewed the processes to obtain trader acceptance for new streetlights.

## New standard unmetered load and additions to existing standard unmetered load

Standard unmetered load is created through the new connection process, and changes are managed through the load alteration process. Both processes require trader acceptance to be provided before the connection can progress.

There were no new connections for standard unmetered load made during the audit period.

## Additions to existing DUML load

Distributed unmetered load follows a separate process and is reliant on the database owner ensuring that any new lights are recorded in the DUML database, and that the trader is advised. The previous two audits have recommended that the process to add new load to existing DUML ICPs was reviewed to ensure that trader acceptance is obtained by TLC prior to initial electrical connection and is repeated this audit.

The previous audit recorded non-compliance in this section as there was no trader acceptance gained prior to the electrical connection of new streetlights for one new street. TLC confirmed there were no new examples of connection of new streetlights during the audit period therefore compliance is recorded.

Recommendation	Description	Audited party comment	Remedial action
Electrical connection of a point of connection	Review the electrical connection process for streetlights to ensure that a trader has accepted responsibility for the additional load.	Audit lead followed-up with Project Manager to ensure compliance going forward.	Identified

#### Shared unmetered load

There is no shared unmetered load on TLC's network.

#### Audit outcome

Compliant

3.17. Electrical disconnection of a point of connection (Clause 10.30C and 10.31C)

#### **Code reference**

Clause 10.30C and 10.31C

#### Code related audit information

A distributor can only disconnect, or electrically disconnect an ICP on its network:

- if empowered to do so by legislation (including the code),
- under its contract with the trader for that ICP or NSP,
- under its contract with the consumer for that ICP.

#### **Audit observation**

The disconnection process was examined.

#### Audit commentary

TLC will only undertake an electrical disconnection when a request is received from a trader or for safety. In both instances TLC will liaise with the relevant trader.

#### Audit outcome

Compliant

## 3.18. Meter bridging (Clause 10.33C)

**Code reference** 

Clause 10.33C

#### Code related audit information

A distributor may only electrically connect an ICP in a way that bypasses a meter that is in place ("bridging") if the distributor has been authorised by the responsible trader.

The distributor can then only proceed with bridging the meter if, despite best endeavours:

- the MEP is unable to remotely electrically connect the ICP,
- the MEP cannot repair a fault with the meter due to safety concerns,
- the consumer will likely be without electricity for a period which would cause significant disadvantage to the consumer.

*If the distributor bridges a meter, the distributor must notify the responsible trader within 1 business day and include the date of bridging in its advice.* 

## **Audit observation**

Processes for meter bridging were reviewed.

## **Audit commentary**

Bridging will only occur in accordance with clause 10.33C, and a service request to unbridge the meter is sent to Influx the following day.

TLC has improved their process since the last audit to include notification to the retailers when a meter has been bridged. Notification is sent to the retailer at the time of the bridging if it takes place during business hours and on the first business day if outside business hours. TLC provided four examples of bridged meters which were all bridged to ensure the customers would not be disadvantaged. Notification was sent to the retailer within one business day for three of the four examples. The meter was bridged at ICP 0001112503WMA43 on 6 November 2023 and notification was not sent to the retailer until 14 November, six business day later.

#### Audit outcome

# Non-compliant

Non-compliance	Des	Description			
Audit Ref: 3.18	Retailer not notified of bridged meter wi	Retailer not notified of bridged meter within one business day.			
With: Clause 10.33C	Potential impact: Low				
	Actual impact: Low

ſ

# 4. MAINTENANCE OF REGISTRY INFORMATION

## 4.1. Changes to registry information (Clause 8 Schedule 11.1)

#### **Code reference**

Clause 8 Schedule 11.1

#### **Code related audit information**

*If information held by the registry that relates to an ICP for which the distributor is responsible changes, the distributor must give written notice to the registry manager of that change.* 

Notification must be given by the distributor within three business days after the change takes effect, unless the change is to the NSP identifier of the NSP to which the ICP is usually connected (other than a change that is the result of the commissioning or decommissioning of an NSP).

In those cases, notification must be given no later than eight business days after the change takes effect.

If the change to the NSP identifier is for more than ten business days, the notification must be provided no later than the 13<sup>th</sup> business day and be backdated to the date the change took effect.

In the case of decommissioning an ICP, notification must be given by the later of three business days after the registry manager has advised the distributor that the ICP is ready to be decommissioned, or three business days after the distributor has decommissioned the ICP.

#### **Audit observation**

The management of registry updates and NSP changes was reviewed. The audit compliance report was reviewed to determine compliance. A diverse sample of ten or all backdated events by event type were reviewed to determine the reasons for the late updates.

#### Audit commentary

#### **Registry update process**

The user selects the event type which requires update in Axos, and the screen is automatically populated with the existing values for each field in Axos and that day's event date. The user modifies the event and event date information as required. Future event dates are not allowed, with the exception of price code updates. Drop-down lists and field validations are set to help to ensure only valid values are entered. Once saved, the changes are synchronised to the registry during the next scheduled synchronisation which occurs nightly. Synchronisation can be triggered manually where an immediate change is required.

Axos retrieves registry acknowledgement files every five minutes. The files are reviewed in the registry manager to identify successful and failed updates. Failed updates appear as synchronisation status alerts on the landing page in Axos and are investigated.

If an event needs to be changed, it can be deleted before the record is synchronised with the registry, otherwise Axos allows event reversals and replacements to be sent. Events can only be reversed if they are the latest event for that event type, and if an older event needs to be reversed all later events must be reversed or the update will need to be manually processed on the registry.

Registry events processed by other parties are updated in Axos daily. A synchronisation is completed each morning at 4am to capture registry data updates within the last seven days. Axos does not use notification files.

# Late registry updates

When information recorded in the registry changes, the distributor should ensure that the registry is updated within three business days. This section assesses compliance for updates to existing information,

and initial population of data for new ICPs is assessed in **sections 3.4** and **3.5**. The tables below show late registry updates for changes to existing information.

# Address events

Update type	Year	Total late	Percentage on time	Average business days
Address	2020	97	88.21%	N/A
	2021	10	99.13%	5.04
	2022	1	99.92%	0.76
	2023	2	99.95%	0.96

Two addresses were updated four and nine business days after the event date to correct the previously recorded address details.

# Pricing events

Update type	Year	Total late	Percentage on time	Average business days
Price codes	2020	0	100%	N/A
	2021	521 N/A		N/A
	2022	175	N/A	N/A
	2023	Unable to determine	N/A	N/A

The audit compliance report identified 1,090 pricing updates made more than three business days after the event date. 976 were within four business days of the event date, ten were over 100 business days. The most backdated update was 315 business days after the event date.

I checked the ten latest pricing events and found six were caused by backdated pricing changes at the trader's request or corrections to pricing with the trader's agreement which were made on time once agreement was reached, and four were delays in processing pricing changes. In all cases the correct event date and attributes were applied.

# Status events

Update type	Year	Total late	Percentage on time	Average business days
Status	2020	44	44.63%	18.43
	2021	2	66.67%	9.50
	2022	23	41.03%	20.03
	2023	16	62.79%	8.19

The management of decommissioned ICPs and accuracy of ICP dates is discussed in **section 4.11**. 16 ICPs had their status updated to "decommissioned" more than three business days after the event date, and more than three business days after the trader's update to "ready for decommissioning" status. I checked all 16 of these and found that 15 were due to late paperwork from the field or processing delays resulting in updates to the registry being late. One ICP was initially updated within three business days then the

event was reversed at the request of the MEP to enable reversal of a metering event and subsequently replaced.

The ICPs were decommissioned with the correct status reason code and event date.

# Network events

Update type	Year	Total late	Percentage on time	Average business days
Network -	2020	8	N/A	N/A
excluding new connections &	2021	8	N/A	N/A
distributed generation	2022	155	N/A	N/A
	2023	3	N/A	N/A

Three late network updates were identified, all three were removals of the direct billed status correcting errors found in the previous audit.

Update type	Year	Total late	Percentage on time	Average business days
Network - Distributed	2020	15	11.76%	123.35
Generation	2021	2	33.33%	215
	2022	49	3.92%	112.92
	2023	42	4.55%	73.77

The audit compliance report recorded 42 network updates of distributed generation details made more than three business days after the event date. Four were within 15 business days of the event date, 15 were within 40 business days of the event date. The latest update was 364 business days after the event date.

I checked the ten latest updates and found they were delayed by late confirmation of distributed generation details. The accuracy of the distributed generation details is discussed in **section 4.6**.

Update type	Year	Total late	Percentage on time	Average business days
Network - NSP	2020	2	N/A	N/A
Changes	2021	0	100%	N/A
	2022	2	N/A	N/A
	2023	0	100%	N/A

There were no late NSP updates identified.

Audit outcome

Non-compliant

Non-compliance	Description				
Audit Ref: 4.1	Two late address updates.

# 4.2. Notice of NSP for each ICP (Clauses 7(1),(4) and (5) Schedule 11.1)

# **Code reference**

Clauses 7(1), 7(4) and 7(5) Schedule 11.1

# **Code related audit information**

Under clause 7(1)(b) of schedule 11.1, the distributor must provide to the registry manager the NSP identifier of the NSP to which the ICP is usually connected.

If the distributor cannot identify the NSP that an ICP is connected to, the distributor must nominate the NSP that the distributor thinks is most likely to be connected to the ICP, taking into account the flow of electricity within its network, and the ICP is deemed to be connected to the nominated NSP.

# Audit observation

The process to determine the correct NSP was examined. The registry list and AC020 report were examined to determine compliance.

Distributor audit report V16

# Audit commentary

For new connections, transformer numbers were provided by the asset management group to the connections team. In Axos the transformer field is not linked to the NSP field, and these must be selected separately by the user.

NSP changes are recorded in Basix. There is no direct update between Basix and the registry, so NSP changes must be updated in Axos and then transferred to the registry. NSP changes are provided via the transformer update file which is sent to the Billing & Registry Specialist on a monthly basis. All changes are then updated in Axos within two business days of receipt of the monthly file. As this is a monthly process any NSP changes are unlikely to be updated within the required timeframe. However, NSP changes are rare and no late NSP changes were identified.

The audit compliance report did not identify any discrepancies.

Comparison of NSP and address data identified five towns or suburbs which had ICPs connected to more than one NSP, shown in the table below:

Address town or suburb and region	HTI0331	NPK0331	OKN0111	ONG0331	TKU0331	Grand Total
Kuratau - Manawatu		2			45	47
Kuratau - Waikato				2	944	946
Otangiwai - Manawatu	2			1		3
Rangipo - Waikato		8			6	14
Waimiha - Manawatu	18			18		36
Westlake Taupo - Manawatu					12	12
Westlake Taupo - Waikato	4					4

All were reviewed and none were found to have the incorrect NSP recorded.

I confirmed that the ICP identified in the previous audit with an incorrect NSP recorded had been resolved.

# Audit outcome

Compliant

# 4.3. Customer queries about ICP (Clause 11.31)

# **Code reference**

Clause 11.31

# Code related audit information

The distributor must advise a customer (or any person authorised by the customer) or embedded generator of the customer or embedded generator's ICP identifier within 3 business days after receiving a request for that information.

# **Audit observation**

Distributor audit report V16

The management of customer queries was examined.

# **Audit commentary**

TLC does receive requests for ICP identifiers from customers, and the information is provided once TLC has verified that the requestor is the customer or has been authorised to request the information by the customer.

# Audit outcome

Compliant

4.4. ICP location address (Clause 2 Schedule 11.1)

# **Code reference**

Clause 2 Schedule 11.1

**Code related audit information** 

Each ICP identifier must have a location address that allows the ICP to be readily located.

# Audit observation

The process to ensure ICP addresses are unique and readily locatable was examined. The registry list and audit compliance report were examined to determine compliance.

# Audit commentary

Axos uses a combination of LINZ, NZ Post and Statistics NZ information in its address search function. The user begins typing an address, and Axos looks up to the linked information so that the user can select the valid address. If the address cannot be found the details are manually populated.

Axos system controls prevent duplicate addresses from being entered, an error message is produced if a user attempts to create an ICP with an address that matches an existing ICP.

As part of the Billing & Registry Specialist's process to check the price plan checks for any address issues (such as lot numbers) are conducted and LINZ is searched to determine whether further address information is available. The registry CD (current details) reports are also run monthly and filtered to check for and update lot numbers if street numbers are available on LINZ or ARC maps.

Review of the audit compliance report did not identify any duplicate addresses or addresses with insufficient details.

Traditionally TLC has supplied two regions – Manawatu for the southern areas and Waikato for the northern areas. When an address is entered in Axos, it automatically assigns a region using its combination of NZ Post and Statistics NZ information. TLC have found that sometimes the region assigned by Axos is different to the expected value. A project is underway to validate and correct the address regions, by extracting all addresses and using filters to identify instances where the region is not consistent with the expected value for the suburb and town. 21 towns, a decrease from the 29 recorded in the last audit, have ICP addresses with two different regions. TLC are in the process of checking and updating if necessary. Prior to finalising this audit TLC had corrected the addresses of 404 of the ICPs identified as detailed in the table below.

Town	Manawatu	Waikato	Taranaki	TOTAL	Number corrected during audit
Benneydale	1	21		22	-
Kuratau	48	945		993	6

Town	Manawatu	Waikato	Taranaki	TOTAL	Number corrected during audit
Maniaiti/Benneydale	12	4		16	13
ONGARUE	152	2		154	2
Otukou	13	10		23	15
OWHANGO	323	4		327	4
Taringamotu	146	1		147	-
Taumarunui	2,709	67		2776	70
Tokaanu	33	87		120	39
Tongaporutu		68	1	69	1
Turangi	99	2,230		2,329	116
Waihaha	4	37		41	4
Αυκοράε	68	1		69	1
KURATAU	42	11		53	49
Manunui	375	26		401	26
ΜΟΤυορά	13	506		519	14
OHURA	192	1		193	1

Pukawa	7	2		9	7
WAIOTAKA VALLEY	1	1		2	2
Westlake Taupo	12	4		16	12

Non-compliance is recorded for the 404 ICPs which were found to have an incorrect region recorded and for an unknown number of ICPs which are likely to have an incorrect region recorded.

# Audit outcome

Non-compliant

Non-compliance

Description

Audit Ref: 4.4	404 ICPs with an incorrect address region recorded on the registry.			
With: Clause 2 Schedule 11.1	An unknown number of other ICPs are likely to have incorrect address regions recorded.			
	Potential impact: Low			
	Actual impact: Low			
	Audit history: Multiple			
From: 01-Mar-23	Controls: Strong			
To: 13-Nov-23	Breach risk rating: 1			
Audit risk rating	Rationale for audit risk rating			
Low	The controls are rated as strong overall as they prevent duplicate and incomplete addresses. TLC is actively working to reduce the number of ICPs with an incorrect region recorded.			
	The audit risk rating is low. All ICPs are expected to be located in Waikato or Manawatu, and TLC uses the suburb and town fields where information is available which will help reduce the risk that other parties may not identify the correct ICP for the address.			
Actions ta	aken to resolve the issue	Completion date	Remedial action status	
All address are being upd	ated with approximately 3,000 to go.	May 2024	Identified	
Preventative actions taken to ensure no further issues will occur		Completion date		
Use Axos default address	sourced from LINZ, NZ Post and Stats NZ	19/02/2024		

# 4.5. Electrically disconnecting an ICP (Clause 3 Schedule 11.1)

# **Code reference**

Clause 3 Schedule 11.1

# Code related audit information

Each ICP created after 7 October 2002 must be able to be electrically disconnected without electrically disconnecting another ICP, except for ICPs that are the point of connection between a network and an embedded network, or ICPs that represent the consumption calculated by the difference between the total consumption for the embedded network and all other ICPs on the embedded network.

# Audit observation

This was examined as part of the new connection process and proof of process was checked as part of the sample of new connections examined.

# Audit commentary

TLC's new connections process contains a step that ensures that any ICP can be disconnected without disconnecting any other ICP, and electricians working on the network are advised of this requirement.

Shared service mains are allowed as long as dedicated isolation points are provided, and they were connected prior to 2002. TLC owns some shared service mains, and TLC endeavours to work with affected customers to replace these as they are discovered.

## Audit outcome

## Compliant

# 4.6. Distributors to Provide ICP Information to the Registry manager (Clause 7(1) Schedule 11.1)

# **Code reference**

Clause 7(1) Schedule 11.1

# Code related audit information

For each ICP on the distributor's network, the distributor must provide the following information to the registry manager:

- the location address of the ICP identifier (clause 7(1)(a) of schedule 11.1),
- the NSP identifier of the NSP to which the ICP is usually connected (clause 7(1)(b) of schedule 11.1),
- the installation type code assigned to the ICP (clause 7(1)(c) of schedule 11.1),
- the reconciliation type code assigned to the ICP (clause 7(1)(d) of schedule 11.1),
- the loss category code and loss factors for each loss category code assigned to the ICP (clause 7(1)(e) of schedule 11.1),
- *if the ICP connects the distributor's network to an embedded generating station that has a capacity of 10MW or more (clause 7(1)(f) of schedule 11.1):* 
  - a) the unique loss category code assigned to the ICP,
  - b) the ICP identifier of the ICP,
  - c) the NSP identifier of the NSP to which the ICP is connected,
  - d) the plant name of the embedded generating station,
- the price category code assigned to the ICP, which may be a placeholder price category code only if the distributor is unable to assign the actual price category code because the capacity or volume information required to assign the actual price category code cannot be determined before electricity is traded at the ICP (clause 7(1)(g) of schedule 11.1),
- if the price category code requires a value for the capacity of the ICP, the chargeable capacity of the ICP as follows (clause 7(1)(h) of schedule 11.1):
  - a) a placeholder chargeable capacity if the distributor is unable to determine the actual chargeable capacity,
  - *b)* a blank chargeable capacity if the capacity value can be determined for a billing period from metering information collected for that billing period,
  - c) if there is more than one capacity value at the ICP, and at least one, but not all, of those capacity values can be determined for a billing period from the metering information collected for that billing period-

(i) no capacity value recorded in the registry field for the chargeable capacity; and (ii) either the term "POA" or all other capacity values, recorded in the registry field in which the distributor installation details are also recorded,

d) if there is more than one capacity value at the ICP, and none of those capacity values can be determined for a billing period from the metering information collected for that billing period-

(i) the annual capacity value recorded in the registry field for the chargeable capacity; and (ii) either the term "POA" or all other capacity values, recorded in the registry field in which the distributor installation details are also recorded,

- e) the actual chargeable capacity of the ICP in any other case,
- the distributor installation details for the ICP determined by the price category code assigned to the ICP (if any), which may be placeholder distributor installation details only if the distributor is unable to assign the actual distributor installation details because the capacity or volume information required to assign the actual distributor installation details cannot be determined before electricity is traded at the ICP (clause 7(1)(i) of schedule 11.1),
- the participant identifier of the first trader who has entered into an arrangement to sell or purchase electricity at the ICP (only if the information is provided by the first trader) (clause 7(1)(j) of schedule 11.1),
- the status of the ICP (clause 7(1)(k) of schedule 11.1),
- designation of the ICP as "dedicated" if the ICP is located in a balancing area that has more than 1 NSP located within it, and the ICP will be supplied only from the NSP advised under clause 7(1)(b) of schedule 11.1, or the ICP is a point of connection between a network and an embedded network (clause 7(1)(I) of schedule 11.1),
- if unmetered load, other than distributed unmetered load, is associated with the ICP, the type and capacity in kW of unmetered load (clause 7(1)(m) of schedule 11.1),
- if shared unmetered load is associated with the ICP, a list of the ICP identifiers of the ICPs that are associated with the unmetered load (clause 7(1)(n) of schedule 11.1),
- *if the ICP is capable of generating into the distributors network (clause 7(1)(o) of schedule 11.1):* 
  - a) the nameplate capacity of the generator; and
  - b) the fuel type,
- the initial electrical connection date of the ICP (clause 7(1)(p) of schedule 11.1).

# Audit observation

The management of registry information was reviewed. The registry list and audit compliance report were examined to determine compliance. A typical sample of data discrepancies were checked. Registry data validation processes are discussed in **section 2.1**.

# Audit commentary

Review of the registry list and audit compliance report identified some data discrepancies. Noncompliance is recorded where data remained incorrect at the time of the on-site audit or was not identified and corrected through TLC's processes. Compliance is confirmed unless discussed below.

# **Initial Electrical Connection Date**

The process to populate initial electrical connection dates is described in section 3.5.

The audit compliance report was reviewed to determine compliance.

- Five ICPs connected during the audit period with IECD discrepancies where there were differences between metering certification date, "active" status date and/or Initial electrical connection date. TLC's initial electrical connection date was correct for four ICPs, and incorrect for one ICP. The incorrect initial electrical connection date was corrected during the audit.
- Two ICPs had initial electrical connection dates populated but had not been moved to "active" status. One was a timing difference and moved to "active" status after the report was run, and TLC's initial electrical connection date was confirmed as correct for the other ICP.
- 166 ICPs created and connected prior to the audit period (but after 29 August 2013) had discrepancies between the initial electrical connection date and the trader's earliest "active"

status date. I checked a sample of 20 ICPs and found TLC's initial electrical connection date was correct for 19 ICPs, and incorrect for one ICP. The incorrect initial electrical connection date was corrected during the audit.

Event dates should reflect the date from which the attribute values for the event apply. In Axos the event date defaults to the current date and can be manually edited by the user if a different event date should be applied. I checked the 167 "active" network events which populated the initial electrical connection date. 164 had an event date which aligned with the initial electrical connection date. The remaining three ICPs had event dates which did not align with the initial electrical connection date as follows:

ІСР	Event Date	Update Date	Initial electrical connection date	Comment
0001113286WMCE4	17 October 2023	17 October 2023	27 July 2023	The IECD was incorrectly updated when DG was added. The IECD was corrected on 29 November 2023.
0003509331WM8F4	9 November 2023	10 November 2023	12 October 2023	The IECD was incorrectly added when DG was added. The IECD was removed on 29 November 2023.
1100000412WMA84	20 March 2023	20 March 2023	6 March 2023	The event date was not manually edited by the user at the time of entry. The event date was corrected on 29 November 2023.

The temporarily incorrect event dates and incorrect initial electrical connection dates are recorded as non-compliance below.

# **Distributed Generation**

I walked through the process for distributed generation.

- TLC requires an application before any distributed generation is connected to their network. The application is submitted using an online form on TLC's website and an application fee is paid at the time of application.
- 2. The application is input into BC (Business Central) and assigned a job number. All associated paperwork is attached in BC.
- 3. The application information is sent to the Engineer for approval, and the network services team is advised of the outcome.
- 4. The network services team advises the customer whether the application is approved or declined and advises the customer of the need to return certificates of compliance (COC) or records of inspection (ROI) on completion of the work.
- 5. Once job completion information is received, TLC updates Axos with the new installation type, generation capacity and fuel type which is then synchronised with the registry. The status of all distributed generation jobs in BC are reviewed daily, and any late certificates of compliance (COC) or records of inspection (ROI) are followed up. TLC normally inspects installations of distributed generation so usually produces the ROI.
- 6. Retailers arrange for import/export metering to be installed by Influx.

Event dates should always reflect the date from which the attribute values for the event apply. For distributed generation this is the date that generation was present and operating from, usually the COC date. There were no cases identified where incorrect event dates had been applied. A recommendation

was made in the last audit to confirm that the distributed generation details are correct for ICP 1100000174WM1FE. It was confirmed that the distributed generation details had been incorrectly added for this ICP at the date of application. The distributed generation was connected during the audit period and the event date has been corrected.

TLC validates distributed generation using the audit compliance report, which is also compared to EIEP information provided by the traders. The audit compliance reports are being reviewed periodically as workloads allow and I saw evidence of regular reviews conducted throughout the audit period.

# Generation information completeness and accuracy

204 "active" ICPs have a non-zero generation capacity recorded on the registry list. All have installation type B or G and a fuel type recorded.

The audit compliance report recorded nine ICPs where the trader's profile indicated generation was present but no distributed generation details were recorded by TLC. These were examined and found:

- six where TLC had not received an application and are not aware of generation being installed, although they had I flow metering,
- two had generation installed and were updated to reflect the correct generation details during the audit, and
- one where TLC has received an application but has not yet received completion paperwork and has followed up with the retailer.

I checked the accuracy of fuel types by comparing them to the trader's profile. In all cases, TLC's fuel type was confirmed to be consistent with the trader's profile where it indicated the fuel type.

Seven ICPs with generation recorded by TLC did not have a generation compatible profile recorded by the trader. These were checked to confirm if distributed generation is still present and found:

- four where TLC had the correct distributed generation details recorded,
- one where it was confirmed that the distributed generation details were incorrectly recorded for a system that is not capable of exporting at ICP 0053158640WM725; this was corrected during the audit,
- one where TLC confirmed that there was no record of a distributed generation system at ICP 0006321800WM1BF, and
- one where TLC confirmed an application was received and a PV system was installed at ICP 0005610201WM164, but the registry was updated with an incorrect fuel type of "natural gas".

# Unmetered Load

Part 11 states the distributors must provide unmetered load type and capacity of the unmetered load to the registry "if known". If distributor unmetered load is populated, it is required to be accurate. Unmetered load data is entered into Axos and transferred to the registry. No unmetered new connections were created during the audit period.

The accuracy of unmetered load information was assessed.

- All "active" ICPs with distributor unmetered load recorded also have the trader unmetered load flag set to yes.
- 45 "active" ICPs had trader unmetered load recorded without distributor unmetered load. All were created in 2006 or earlier, and TLC had not populated unmetered load details for these ICPs because they were not aware of the unmetered load and were therefore not required to update their distributor unmetered load details.
- For the 59 ICPs where distributor unmetered load was in a format which enabled recalculation, I compared the figures to the trader unmetered load. In all 59 cases the calculation matched the trader's unmetered load figure within ±0.01 kWh.

# DUML and shared unmetered load

Review of the most recent DUML audits for streetlight databases on TLC's network did not identify any issues relating to distributor unmetered load records.

# NSP accuracy

Review of the registry list and audit compliance report confirmed that the correct NSP was assigned for all ICPs.

The dedicated and non-dedicated NSP flag recorded for each ICP in the registry was checked. It is expected that all of TLCs ICPs will have the flag set to "N". ICP 1100000603WM66B was incorrectly set to "Y" when the initial electrical connection information was entered on 27 November 2023, this was subsequently corrected on 7 December 2023. Non-compliance is recorded for the period where the NSP dedicated flag was incorrect.

# Audit outcome

Non-compliant

Non-compliance	Description			
Audit Ref: 4.6	Initial electrical connection dates			
With: 7(1) of Schedule 11.1	<ul> <li>One ICP created during the audit period, and three ICPs created and connected prior to the audit period (but after 29 August 2013) had incorrect initial electrical connection dates.</li> <li>One network event populating the initial electrical connection date had an incorrect event date applied.</li> </ul>			
	Distributed generation			
	Three ICPs had incorrect distributed generation details.			
	NSP			
	Incorrect NSP dedicated flag for one ICP.			
	Potential impact: Low			
	Actual impact: Low			
	Audit history: Multiple			
From: 01-Mar-23	Controls: Moderate			
To: 13-Nov-23	Breach risk rating: 2			
Audit risk rating	Rationale for audit risk rating			
Low	I have rated the controls as moderate as they will mitigate risk most of the time but there is room for improvement.			
	The audit risk rating is assessed as low, as all the affected data has been corrected.			
Actions taken to resolve the issue Completion date			Remedial action status	
Set NSP to No. DG issue b	eing investigated and to update.	June 2024	Identified	
Preventative actions take	en to ensure no further issues will occur	Completion date		

Training, investigate with Axos about having a warning label	April 2024	
when ticked, and exception reporting.		

# 4.7. Provision of information to registry after the trading of electricity at the ICP commences (Clause 7(3) Schedule 11.1)

# **Code reference**

Clause 7(3) Schedule 11.1

## **Code related audit information**

The distributor must provide the following information to the registry no later than ten business days after the trading of electricity at the ICP commences:

- the actual price category code assigned to the ICP (clause 7(3)(a) of schedule 11.1),
- the actual chargeable capacity of the ICP determined by the price category code assigned to the ICP (if any) (clause 7(3)(b) of schedule 11.1),
- the actual distributor installation details of the ICP determined by the price category code assigned to the ICP (if any) (clause 7(3)(c) of schedule 11.1).

# **Audit observation**

The management of registry information was reviewed. The registry list and audit compliance report were reviewed to determine compliance.

# Audit commentary

All new ICPs created during the audit period had pricing information loaded prior to initial electrical connection.

#### Audit outcome

Compliant

# 4.8. GPS coordinates (Clause 7(8) and (9) Schedule 11.1)

#### **Code reference**

Clause 7(8) and (9) Schedule 11.1

**Code related audit information** 

*If a distributor populates the GPS coordinates (optional), it must meet the NZTM2000 standard in a format specified by the Authority.* 

#### Audit observation

The registry list was reviewed to determine compliance. ICPs with GPS coordinates were checked to determine whether they were accurate and in the correct format.

# Audit commentary

GPS coordinates are optional, but if populated the registry requires New Zealand Transverse Mercator 2000 (NZTM2000 easting, northing) coordinates.

GPS coordinates were recorded for 175 "active" and "inactive" ICPs on the registry list. I plotted all ICPs and confirmed that the coordinates were in NZTM2000 format and consistent with the other address information.

#### Audit outcome

Distributor audit report V16

# Compliant

# 4.9. Management of "ready" status (Clause 14 Schedule 11.1)

# Code reference

Clause 14 Schedule 11.1

**Code related audit information** 

The ICP status of "ready" must be managed by the distributor and indicates that:

- the associated electrical installations are ready for connecting to the electricity supply (clause 14(1)(a) of schedule 11.1); or
- the ICP is ready for activation by a trader (clause 14(1)(b) of schedule 11.1).

Before an ICP is given the "ready" status in accordance with clause 14(1) of schedule 11.1, the distributor must:

- identify the trader that has taken responsibility for the ICP (clause 14(2)(a) of schedule 11.1),
- ensure the ICP has a single price category (clause 14(2)(b) of schedule 11.1).

## Audit observation

The management of ICPs in relation to the use of the "ready" status was examined. The registry list and audit compliance report were examined to determine compliance.

## Audit commentary

TLC's new connections process includes a step to confirm trader acceptance before livening is scheduled. Each ICP has a single price category.

All 29 ICPs at "ready" status had a single price category assigned and proposed trader identified. The timeliness of updates to "ready" is discussed in **section 3.4**, and monitoring of ICPs at "ready" status is discussed in **section 3.14**.

#### Audit outcome

Compliant

#### 4.10. Management of "distributor" status (Clause 16 Schedule 11.1)

#### Code reference

Clause 16 Schedule 11.1

# **Code related audit information**

The ICP status of "distributor" must be managed by the distributor and indicates that the ICP record represents a shared unmetered load installation or the point of connection between an embedded network and its parent network.

#### Audit observation

Processes to manage the "distributor" status were reviewed. The registry list and audit compliance report were examined to determine compliance.

#### **Audit commentary**

Analysis of the registry list confirmed that no ICPs are at "distributor" status. There are no embedded networks or shared unmetered load connections on TLC's network.

#### Audit outcome

Distributor audit report V16

# Compliant

4.11. Management of "decommissioned" status (Clause 20 Schedule 11.1)

# Code reference

Clause 20 Schedule 11.1

# **Code related audit information**

The ICP status of "decommissioned" must be managed by the distributor and indicates that the ICP is permanently removed from future switching and reconciliation processes (clause 20(1) of schedule 11.1).

Decommissioning only occurs when:

- electrical installations associated with the ICP are physically removed (clause 20(2)(a) of schedule 11.1); or
- there is a change in the allocation of electrical loads between ICPs with the effect of making the ICP obsolete (clause 20(2)(b) of schedule 11.1); or
- in the case of a distributor only ICP for an embedded network, the embedded network no longer exists (clause 20(2)(c) of schedule 11.1).

# Audit observation

The registry list and audit compliance report were reviewed to identify ICPs at the "decommissioned" or "ready for decommissioning" status.

A sample of ten "decommissioned" ICPs were examined. I also examined all ICPs at "ready for decommissioning" status.

# Audit commentary

TLC's ICP decommissioning processes requires a request to be made either directly to approved contractors, or to TLC via either the database or asset teams. If via approved contractors, the contractor must provide notification to TLC. TLC then confirms the ICP ownership and gains permission from the customer prior to decommissioning. TLC's policy is to change the status upon receipt of the appropriate paperwork, including confirmation that metering has been removed.

Where an ICP is to be decommissioned because it is dismantled (3,2 status) or amalgamated (3,3 status) the trader must move the ICP to "inactive - ready for decommissioning" (1,6 status), and then TLC updates Axos with the correct status, status reason and event date which is synchronised to the registry using the process described in **section 2.1**.

Where an ICP is to be decommissioned because it was set up in error, the ICP will be reversed from "ready" to "new" status by removing the distributor pricing information in Axos (which is then synchronised to the registry), or the trader will move the ICP to "inactive - ready for decommissioning" (1,6 status). Axos can then be updated with the correct status and status reason and synchronised with the registry.

TLC uses filters in Axos to identify all ICPs at "ready for decommissioning" status, and monitor whether applications for decommissioning are received.

As reported in the last audit TLC had completed a "questionable ICP project" which identified ICPs which may have been decommissioned without their knowledge or may need to be decommissioned. Under this process the customer and trader were contacted to confirm the correct status for the ICP and approve decommissioning if the ICP was no longer required. In situations where approval could not be obtained by the customer, a "force decommission" process was followed and the ICP would be decommissioned after a site visit was conducted.

I checked a sample of ten decommissioned ICPs for accuracy and found they were processed correctly.

Examination of the list file found seven ICPs are at "ready for decommissioning" status. Three ICPs were decommissioned after the report was run and before the audit.

| Number of |
|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| ICPs 2023 | ICPs 2022 | ICPs 2021 | ICPs 2020 | ICPs 2019 | ICPs 2018 | ICPs 2017 | ICPs 2016 |
| 7         | 15        | 12        | 8         | 5         | 42        | 76        | 52        |

I checked all four ICPs still at "ready for decommissioning" status and found approval for decommissioning has not been provided after TLC has followed up with the trader and attempted to contact the customer. ICPs are not able to be decommissioned without customer approval now that the "force decommission" process is no longer used.

# Audit outcome

Compliant

4.12. Maintenance of price category codes (Clause 23 Schedule 11.1)

# **Code reference**

Clause 23 Schedule 11.1

# **Code related audit information**

The distributor must keep up to date the table in the registry of the price category codes that may be assigned to ICPs on each distributor's network by entering in the table any new price category codes.

Each entry must specify the date on which each price category code takes effect, which must not be earlier than two months after the date the code is entered in the table.

A price category code takes effect on the specified date.

# **Audit observation**

The price category code table on the registry was examined.

# **Audit commentary**

The price category code table on the registry was examined. TLC did not create any new price category codes during the audit period.

# Audit outcome

# 5. CREATION AND MAINTENANCE OF LOSS FACTORS

#### 5.1. Updating table of loss category codes (Clause 21 Schedule 11.1)

#### **Code reference**

Clause 21 Schedule 11.1

#### Code related audit information

The distributor must keep the registry up to date with the loss category codes that may be assigned to ICPs on the distributor's network.

The distributor must specify the date on which each loss category code takes effect.

A loss category code takes effect on the specified date.

#### **Audit observation**

The loss category code table on the registry was examined.

#### **Audit commentary**

TLC has not created any new loss factors during the audit period.

#### Audit outcome

Compliant

#### 5.2. Updating loss factors (Clause 22 Schedule 11.1)

#### **Code reference**

Clause 22 Schedule 11.1

#### Code related audit information

Each loss category code must have a maximum of 2 loss factors per calendar month. Each loss factor must cover a range of trading periods within that month so that all trading periods have a single applicable loss factor.

*If the distributor wishes to replace an existing loss factor on the table in the registry, the distributor must enter the replaced loss factor on the table in the registry.* 

#### **Audit observation**

The loss category code table on the registry was examined.

#### **Audit commentary**

TLC has not changed any loss factors during the audit period.

#### Audit outcome

# 6. CREATION AND MAINTENANCE OF NSPS (INCLUDING DECOMMISSIONING OF NSPS AND TRANSFER OF ICPS)

# 6.1. Creation and decommissioning of NSPs (Clause 11.8 and Clause 25 Schedule 11.1)

#### **Code reference**

Clause 11.8 and Clause 25 Schedule 11.1

## **Code related audit information**

If the distributor is creating or decommissioning an NSP that is an interconnection point between 2 local networks, the distributor must give written notice to the reconciliation manager of the creation or decommissioning.

If the embedded network owner is creating or decommissioning an NSP that is an interconnection point between 2 embedded networks, the embedded network owner must give written notice to the reconciliation manager of the creation or decommissioning.

If the distributor is creating or decommissioning an NSP that is a point of connection between an embedded network and another network, the distributor must give written notice to the reconciliation manager of the creation or decommissioning.

The notice provided to the reconciliation manager must be provided no later than 30 days prior to the intended date or creation or decommissioning.

*If the intended date of creation or decommissioning changes the distributor must provide an updated notice as soon as possible.* 

If the distributor wishes to change the record in the registry of an ICP that is not recorded as being usually connected to an NSP in the distributor's network, so that the ICP is recorded as being usually connected to an NSP in the distributor's network, the distributor must:

- give written notice to the reconciliation manager,
- give written notice to the Authority,
- give written notice to each affected reconciliation participant,
- comply with Schedule 11.2.

#### **Audit observation**

The NSP table was examined.

#### **Audit commentary**

TLC did not create or decommission any NSPs during the audit period.

#### Audit outcome

Compliant

# 6.2. Provision of NSP information (Clause 26(1) and (2) Schedule 11.1)

#### **Code reference**

Clause 26(1) and (2) Schedule 11.1

#### Code related audit information

*If the distributor wishes to create an NSP or transfer an ICP as described above, the distributor must request that the reconciliation manager create a unique NSP identifier for the relevant NSP.* 

The request must be made at least ten business days before the NSP is electrically connected, in respect of an NSP that is an interconnection point between 2 local networks. In all other cases, the request must be made at least one month before the NSP is electrically connected or the ICP is transferred.

#### Audit observation

The NSP table was examined.

## **Audit commentary**

No new NSPs were created by TLC during the audit period.

## Audit outcome

Compliant

6.3. Notice of balancing areas (Clause 24(1) and Clause 26(3) Schedule 11.1)

# **Code reference**

Clause 24(1) and Clause 26(3) Schedule 11.1

## **Code related audit information**

If a participant has notified the creation of an NSP on the distributor's network, the distributor must give written notice to the reconciliation manager of the following:

- if the NSP is to be located in a new balancing area, all relevant details necessary for the new balancing area to be created and notification that the NSP to be created is to be assigned to the new balancing area,
- in all other cases, notification of the balancing area in which the NSP is located.

#### Audit observation

The NSP table was reviewed.

#### **Audit commentary**

No balancing area changes occurred during the audit period.

#### Audit outcome

Compliant

# 6.4. Notice of supporting embedded network NSP information (Clause 26(4) Schedule 11.1)

#### **Code reference**

Clause 26(4) Schedule 11.1

#### Code related audit information

If a participant notifies the creation of an NSP, or the transfer of an ICP to an NSP that is a point of connection between a network and an embedded network owned by the distributor, the distributor must give notice to the reconciliation manager at least one month before the creation or transfer of:

- the network on which the NSP will be located after the creation or transfer (Clause 26(4)(a))
- the ICP identifier for the ICP that connects the network and the embedded network (Clause 26(4)(b))
- the date on which the creation or transfer will take effect (Clause 26(4)(c)).

#### Audit observation

The NSP table was reviewed.

Distributor audit report V16

# Audit commentary

TLC has not created any new embedded networks during the audit period.

Audit outcome

Compliant

# 6.5. Maintenance of balancing area information (Clause 24(2) and (3) Schedule 11.1)

**Code reference** 

Clause 24(2) and (3) Schedule 11.1

# Code related audit information

The distributor must give written notice to the reconciliation manager of any change to balancing areas associated with an NSP supplying the distributor's network. The notification must specify the date and trading period from which the change takes effect and be given no later than three business days after the change takes effect.

#### **Audit observation**

The NSP table was reviewed.

## **Audit commentary**

No balancing area changes have occurred during the audit period.

Audit outcome

Compliant

# 6.6. Notice when an ICP becomes an NSP (Clause 27 Schedule 11.1)

#### **Code reference**

Clause 27 Schedule 11.1

# **Code related audit information**

If a transfer of an ICP results in an ICP becoming an NSP at which an embedded network connects to a network, or in an ICP becoming an NSP that is an interconnection point, in respect of the distributor's network, the distributor must give written notice to any trader trading at the ICP of the transfer at least 1 month before the transfer.

#### Audit observation

The NSP table was reviewed.

#### **Audit commentary**

No existing ICPs became NSPs during the audit period.

#### Audit outcome

# 6.7. Notification of transfer of ICPs (Clause 1 to 4 Schedule 11.2)

# **Code reference**

Clause 1 to 4 Schedule 11.2

# **Code related audit information**

*If the distributor wishes to transfer an ICP, the distributor must give written notice to the Authority in the prescribed form, no later than 3 business days before the transfer takes effect.* 

## **Audit observation**

The NSP table was reviewed.

## **Audit commentary**

TLC has not initiated the transfer of any ICPs during the audit period.

#### Audit outcome

## Compliant

6.8. Responsibility for metering information for NSP that is not a POC to the grid (Clause 10.25(1) and 10.25(3))

## **Code reference**

Clause 10.25(1) and 10.25(3)

# Code related audit information

A network owner must, for each NSP that is not a point of connection to the grid for which it is responsible, ensure that:

- there is one or more metering installations (Clause 10.25(1)(a)); and
- the electricity is conveyed and quantified in accordance with the Code (Clause 10.25(1)(b))

For each NSP covered in 10.25(1) the network owner must, no later than 20 business days after a metering installation at the NSP is recertified advise the reconciliation manager of:

- the reconciliation participant for the NSP,
- the participant identifier of the metering equipment provider for the metering installation,
- the certification expiry date of the metering installation.

#### Audit observation

The Network Supply Points (NSP) table was examined to determine compliance.

#### **Audit commentary**

The NSP table was reviewed for NSPs where LINE was the responsible participant:

Dist	NSP POC	Description	MEP	Certification Expiry (last audit)	Certification Expiry (this audit)
LINE	MEP0112	ΜΟΚΑΙ	FCLM	2 December 2024	2 December 2024
LINE	MEP0113	ΜΟΚΑΙ	FCLM	2 December 2024	2 December 2024
LINE	TLC0111	TANGIWAI OHAKUNE INTERCONNECT	FCLM	18 August 2023	18 August 2028
LINE	WKM0331	WHAKAMARU	FCLM	19 October 2024	19 October 2024

The metering installation certification at NSP TLC0111 expired on 18 August 2023 and recertification took place on 28 October 2023. Clause 10.25 requires the distributor to ensure there is a metering installation and to have a contract in place with an MEP. The responsibility for maintaining certification of the metering installation lies with the MEP as per the requirements of clause 10.38. The distributor is required by clause 10.25(3) to provide notification to the Reconciliation Manager of the reconciliation participant, MEP identifier and certification expiry date no later than 20 business days after recertification. TLC provided details of the certification to the Reconciliation Manager after 31 business days on 12 December 2023. TLC is reliant on receiving the details of the recertification from the MEP to notify the Reconciliation Manager. In this case the MEP did not provide the certification details until 12 December 2023.

## Audit outcome

Non-compliant

Non-compliance	Description				
Audit Ref: 6.8 With: Clause 10.25(1) & 10.26(1)	Metering installation certification details were not provided to the reconciliation manager within 20 business days of recertification for TLC0111.				
	Potential impact: Low				
	Actual impact: Low				
	Audit history: Once				
From: 27-Nov-23	Controls: Strong				
To: 12-Dec-23	Breach risk rating: 1				
Audit risk rating	Rationale for audit risk rating				
Low	Controls are rated strong because the TLC process ensured that certification details were provided the day the certification report was received.				
	The audit risk rating is assessed as low as the impact on reconciliation is minor.				
Actions ta	aken to resolve the issue	Completion date	Remedial action status		
Reliant on MEP and their contractor to certify the meter.		12/12/2023	Cleared		
Preventative actions take	en to ensure no further issues will occur	Completion date			
	f meter expiry and renewal date and ob early. If continued delays occur,	March 2024			

# 6.9. Responsibility for metering information when creating an NSP that is not a POC to the grid (Clause 10.25(2))

Code reference

Clause 10.25(2)

Code related audit information

*If the network owner proposes the creation of a new NSP which is not a point of connection to the grid it must:* 

- assume responsibility for being the metering equipment provider (clause 10.25(2)(a)(i)); or
- contract with a metering equipment provider to be the MEP (clause 10.25(2)(a)(ii)); and
- no later than 20 business days after identifying the MEP advise the reconciliation manager in the prescribed form of:
  - a) the reconciliation participant for the NSP (clause 10.25(2)(b)(i)); and
  - b) the MEP for the NSP (clause 10.25(2)(b)(ii)); and
  - c) no later than 20 business days after the data of certification of each metering installation, advise the reconciliation participant for the NSP of the certification expiry date (clause 10.25(2)(c)).

## Audit observation

The NSP table was reviewed.

## Audit commentary

TLC has not created any new NSPs during the audit period.

## Audit outcome

Compliant

# 6.10. Obligations concerning change in network owner (Clause 29 Schedule 11.1)

## Code reference

Clause 29 Schedule 11.1

# **Code related audit information**

If a network owner acquires all or part of a network, the network owner must give written notice to:

- the previous network owner (clause 29(1)(a) of schedule 11.1),
- the reconciliation manager (clause 29(1)(b) of schedule 11.1),
- the Authority (clause 29(1)(c) of schedule 11.1),
- every reconciliation participant who trades at an ICP connected to the acquired network or part of the network acquired (clause 29(1)(d) of schedule 11.1).

At least one month notification is required before the acquisition (clause 29(2) of schedule 11.1).

The notification must specify the ICPs to be amended to reflect the acquisition and the effective date of the acquisition (clause 29(3) of schedule 11.1).

#### Audit observation

The NSP table on the registry was examined.

#### **Audit commentary**

TLC have not initiated any changes of network owner.

#### Audit outcome

Compliant

# 6.11. Change of MEP for embedded network gate meter (Clause 10.22(1)(b))

Code reference

Clause 10.22(1)(b)

Distributor audit report V16

# **Code related audit information**

If the MEP for an ICP which is also an NSP changes the participant responsible for the provision of the metering installation under Clause 10.25, the participant must advise the reconciliation manager and the gaining MEP.

# Audit observation

The NSP supply point table was examined.

## **Audit commentary**

No MEP changes occurred during the audit period.

## Audit outcome

Compliant

6.12. Confirmation of consent for transfer of ICPs (Clauses 5 and 8 Schedule 11.2)

## **Code reference**

Clauses 5 and 8 Schedule 11.2

## **Code related audit information**

*The distributor must give the Authority confirmation that it has received written consent to the proposed transfer from:* 

- the distributor whose network is associated with the NSP to which the ICP is recorded as being connected immediately before the notification (unless the notification relates to the creation of an embedded network) (clause 5(a) of schedule 11.2)
- every trader trading at an ICP being supplied from the NSP to which the notification relates (clause 5(b) of schedule 11.2).

The notification must include any information requested by the Authority (Clause 8 of Schedule 11.2).

# Audit observation

The NSP table was reviewed.

#### **Audit commentary**

TLC has not initiated the transfer of any ICPs during the audit period.

#### Audit outcome

Compliant

# 6.13. Transfer of ICPs for embedded network (Clause 6 Schedule 11.2)

# **Code reference**

Clause 6 Schedule 11.2

# Code related audit information

*If the notification relates to an embedded network, it must relate to every ICP on the embedded network.* 

Audit observation

The NSP table was reviewed.

Audit commentary

TLC has not initiated the transfer of any ICPs during the audit period.

Audit outcome

# 7. MAINTENANCE OF SHARED UNMETERED LOAD

## 7.1. Notification of shared unmetered load ICP list (Clause 11.14(2) and (4))

#### **Code reference**

Clause 11.14(2) and (4)

#### **Code related audit information**

The distributor must give written notice to the registry manager and each trader responsible for the ICPs across which the unmetered load is shared of the ICP identifiers of those ICPs.

A distributor who receives notification from a trader relating to a change under Clause 11.14(3) must give written notice to the registry manager and each trader responsible for any of the ICPs across which the unmetered load is shared of the addition or omission of the ICP.

#### Audit observation

The registry list for was reviewed to identify all ICPs with shared unmetered load. Findings of streetlight audits on the network were considered.

#### Audit commentary

TLC has no existing shared unmetered load. Review of the most recent DUML audits for streetlight databases on TLC's network did not identify any issues relating to shared unmetered load.

#### Audit outcome

Compliant

#### 7.2. Changes to shared unmetered load (Clause 11.14(5))

#### **Code reference**

Clause 11.14(5)

#### **Code related audit information**

If the distributor becomes aware of a change to the capacity of a shared unmetered load ICP or if a shared unmetered load ICP is decommissioned, it must give written notice to all traders affected by that change or decommissioning as soon as practicable after the change or decommissioning.

#### Audit observation

The registry list was reviewed to identify all ICPs with shared unmetered load.

#### **Audit commentary**

Review of the registry list confirmed that no ICPs have shared unmetered load recorded, and there have been no changes to shared unmetered load information.

#### Audit outcome

# 8. CALCULATION OF LOSS FACTORS

## 8.1. Creation of loss factors (Clause 11.2)

**Code reference** 

Clause 11.2

#### **Code related audit information**

A participant must take all practicable steps to ensure that information that the participant is required to provide to any person under Part 11 is:

- a) complete and accurate,
- b) not misleading or deceptive,
- c) not likely to mislead or deceive.

## **Audit observation**

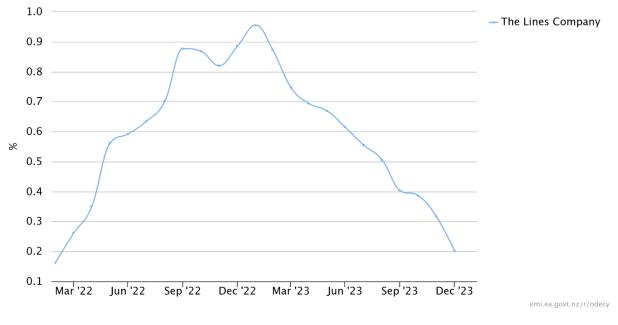

The "Guidelines on the calculation and the use of loss factors for reconciliation purposes" was published on 26 June 2018. I have assessed TLC's process and compliance against the guideline's recommended thresholds.

#### Audit commentary

Loss factor reviews were historically conducted every ten years, or if a major change to the network occurs which is likely to have a material impact on loss factors. TLC's loss factors were last updated in April 2008 and no new loss factors have been created since then. The last review of loss factors took place in 2018.

I obtained the latest UFE information from the EMI website (see chart below) which confirms that UFE is tracking within the accepted +/-1% threshold.

# TLC UFE ratio (12 month rolling average)

# Audit outcome

# CONCLUSION

TLC have continued to make improvements during the audit period. Four of the five recommendations from the last audit have been adopted which has led to improvements in data accuracy through improvements in data validation. I have repeated the recommendation from previous audits that TLC reviews the electrical connection process for streetlights to ensure that a trader has accepted responsibility for the additional load.

The main areas of non-compliance relate to the timeliness and accuracy of registry updates. The late updates were due to delays in processing information, backdated corrections, or late provision of information from the field. Most of the inaccurate information identified was corrected during the audit.

This audit found nine areas of non-compliance and makes one recommendation for improvement. The future risk rating is 13 (a reduction from 21 in the last audit), indicating that the next audit be due in 12 months. I have considered this in conjunction with TLC's responses and I agree with this recommendation.

# PARTICIPANT RESPONSE

We are pleased with the progress we have made so far. We like to continue making improvements and welcome and accept the recommendations from the auditor.

- Progress streetlight process
  - Audit Team lead is in discussion with Project Manager to create a process to have retailer acceptance prior to connecting streetlights.
- The list of IECD v first Active date is going to be fully checked. (Only the samples were checked for this audit).
- Investigate DG installations
  - There is a list of 37 ICPs TLC is investigating, 8 of those have now been resolved.
  - 13 ICPs are likely to have generation.
  - 16 ICPs are likely to have no generation.
- Investigate flags in Axos for dates outside of range and NSP flag.
- Continued exception reporting
  - Exception reporting through Power BI is now done weekly.
    - Audit Compliance reporting twice per month with a view to increase reporting to weekly.
    - Regular interrogation of the Curren Details report.
  - Continued and ongoing training.
    - $\circ$   $\;$  This includes awareness training to the wider team of our obligations.
